Executive Summary

This report presented a detailed usability evaluation and redesign of the Lurreli Online Shopping Store, applying key concepts and methodologies from the field of Human Computer Interaction. Through the use of heuristic evaluation, simulated user testing, and simulated user surveys, several significant usability and user experience issues were identified in the original website design. These issues included unclear navigation, weak visual hierarchy, inconsistent interface elements, insufficient feedback, poor form usability, unclear size and color selection, and limited accessibility considerations.

The redesign phase directly addressed these identified issues using a user-centered design approach. High-fidelity prototypes were developed to improve navigation clarity, visual consistency, feedback mechanisms, error prevention, and overall usability. The comparison of before-and-after design screens clearly demonstrates how applying established HCI principles, particularly Nielsen's usability heuristics, can lead to measurable improvements in interface quality and user experience.

Evaluation of the redesigned interface shows notable improvements in key usability goals such as learnability, allowing new users to understand the system more quickly; efficiency, enabling users to complete tasks with fewer steps and less confusion; error reduction, through clearer feedback and validation; and user satisfaction, supported by a cleaner and more modern interface design. These improvements highlight the effectiveness of systematic usability evaluation and iterative redesign in enhancing e-commerce systems.

Overall, this assignment provided valuable practical experience in applying theoretical HCI concepts to a real-world system. It reinforces the importance of usability evaluation as a continuous process rather than a one-time activity and demonstrates how user-centered design can significantly improve the quality, accessibility, and success of interactive systems. The findings of this study emphasize that usability is a critical factor in the design of modern e-commerce platforms and should be considered throughout the system development lifecycle.

Lurreli Online Shopping Store: <https://lurreli.lk/>

1. Introduction

Human–Computer Interaction (HCI) is a multidisciplinary field concerned with the design, evaluation, and implementation of interactive computing systems for human use. The primary objective of HCI is to ensure that systems are not only functional, but also usable, efficient, accessible, and satisfying for end users. In contemporary digital environments particularly e-commerce platforms usability and user experience are critical factors influencing customer engagement, retention, and conversion rates.

Online shopping websites are expected to provide intuitive navigation, visually coherent layouts, clear feedback mechanisms, and error-tolerant interaction flows. Poor usability can lead to user frustration, abandoned shopping carts, and loss of trust in the system. Consequently, systematic usability evaluation and evidence-based redesign are essential for improving the quality of interactive systems.

This report presents a comprehensive usability evaluation and redesign of the **Lurreli Online Shopping Store**. The evaluation was conducted using recognized usability evaluation approaches, including heuristic evaluation, simulated user testing, and simulated user surveys. Based on the identified usability issues, a redesigned interface was proposed and developed using high fidelity prototypes. The report adheres to core HCI theories and principles covered in the module and follows a formal academic structure.

2. System Overview

2.1 Overview of the Lurreli Online Shopping Store (Before Redesign)

Lurreli is an online shopping platform that enables users to browse fashion-related products, view detailed product information, select sizes and colors, create user accounts, log in, and communicate with the business through a contact page. The system is designed primarily for desktops and laptop users and targets general online shoppers.

Although the website provides essential e-commerce functionalities, the original interface exhibited several usability and user experience issues. These issues negatively affected navigation efficiency, visual clarity, consistency, feedback, and accessibility, ultimately reducing overall user satisfaction.

2.2 Target Users

The primary target users of the Lurreli website include:

- Young adults familiar with online shopping
- Desktop and laptop users
- First-time visitors seeking fashion products

2.3 User Goals

Typical user goals when interacting with the Lurreli website include:

- Browsing products easily and efficiently
- Viewing clear and accurate product information
- Selecting sizes and colors without confusion
- Creating an account or logging in smoothly
- Contacting the business for inquiries or support

3. Methodology

This study adopted a simulated usability evaluation approach, which is widely accepted in HCI coursework when access to real users is limited. The methodology was designed to reflect real-world usability evaluation practices while remaining appropriate for an undergraduate academic context.

To improve the reliability and validity of the findings, multiple usability evaluation methods were employed, enabling triangulation of results. The selected methods include heuristic evaluation, simulated user testing, and simulated user surveys.

3.1 Heuristic Evaluation

A heuristic evaluation was conducted using Nielsen's Ten Usability Heuristics, which are internationally recognized principles for evaluating user interfaces. Each major page of the original Lurreli website was systematically examined, including the homepage, product listing pages, product detail pages, size and color selection interface, login and create account pages, and the contact page.

Identified usability issues were mapped to relevant heuristic principles and assigned a severity rating on a scale from 0 to 4:

- 0 – Not a usability problem
- 1 – Cosmetic problem only
- 2 – Minor usability problem
- 3 – Major usability problem
- 4 – Usability catastrophe

This severity rating helped prioritize issues that required immediate attention during the redesign phase.

3.2 Simulated User Testing

Simulated user testing was carried out using realistic user personas and task scenarios based on typical e-commerce behavior. Although simulated, the tasks closely represented real user interactions. The tasks included browsing products, navigating categories, viewing product details, selecting sizes and colors, creating an account, logging in, and submitting inquiries through the contact page.

Potential user difficulties, confusion points, errors, and delays were documented based on known usability patterns and observed interface limitations.

3.3 Simulated User Survey

A simulated usability survey was designed to capture subjective user perceptions of the original interface. The survey included Likert-scale and open-ended questions focusing on ease of navigation, visual appeal, readability, task completion, and overall satisfaction. Survey findings were used to support and validate results from the heuristic evaluation and simulated user testing.

4. Usability Evaluation Results

The usability evaluation of the original Lurreli online shopping store revealed several critical usability and user experience issues. These findings are based on heuristic evaluation, simulated user testing, and simulated user survey feedback.

4.1 Heuristic Evaluation Summary Table

Table 1

Nielsen Heuristic	Identified Issue (Original Website)	Impact on User	Severity (0-4)	Redesign Solution
Visibility of system status	Lack of feedback after login and account creation	Users are unsure whether actions were successful	3	Clear successful messages and visual feedback
Match between system and real world	Technical labels and unclear terminology	Confusion among first time users	2	Simplified, user friendly language
User control and freedom	No clear way to undo action or navigate back	Increased frustration	2	Improved navigation and back options
Consistency and standards	Inconsistent button styles and layouts	Learning difficulty	3	Standardized buttons, colors and layouts
Error prevention	Poor form validation	Increased input errors	3	Inline validation and clear error messages
Recognition rather than recall	Hidden or unclear navigation elements	Increased cognitive load	3	Visible menus and clear icons
Flexibility and efficiency of use	Limited shortcuts and filtering options	Slower task completion	2	Improved filtering and navigation
Aesthetic and minimalist design	Cluttered layouts and poor spacing	Reduced readability	3	Clean, minimalist layout
Help users recognize, diagnose and recover from errors	Generic error messages	Confusion and delays	2	Descriptive actionable error messages
Help and documentation	Lack of guidance for new users	Poor onboarding experience	2	Improved labels and on screen guidance

4.2 Navigation Issues

Simulated user testing revealed that users struggled to locate important sections of the website efficiently. The navigation structure lacked a clear hierarchy, and essential links were not immediately visible. This significantly affected task completion time and violated the heuristic of recognition rather than recall.

4.3 Visual Design and Layout Issues

The original interface demonstrated inconsistent typography, inadequate spacing, and weak visual hierarchy. Survey feedback indicated that users found the interface visually overwhelming. These issues violated the heuristic of aesthetic and minimalist design.

4.5 Size and Color Selection Issues

The size and color selection interface was unclear and inconsistent. Users found it difficult to understand selected options, increasing the risk of incorrect purchases.

5. Key Usability Problems Identified

Based on the evaluation, key usability problems were categorized into navigation and information architecture issues, visual hierarchy and readability issues, interaction and feedback issues, form design and error handling issues, and accessibility limitations. These problems significantly affected learnability, efficiency, and user satisfaction.

6. Redesign Goals

The primary goals of the redesign were to:

- Improve navigation clarity and information architecture
- Enhance visual consistency and hierarchy
- Provide clear feedback and stronger error prevention
- Improve accessibility and readability
- Create a modern, user-friendly shopping experience

7. Redesign Proposal (After Redesign)

The redesign of the Lurreli online shopping store was developed after a careful visual and usability analysis of the **before and after design screens** provided by the design team. The comparison of these screens clearly demonstrates how specific usability issues identified during the evaluation phase were addressed through concrete interface changes. The redesign focuses on improving visual hierarchy, consistency, feedback, accessibility, and overall user experience, while preserving the core functionality of the original system.

The following subsections explicitly reference the **before and after design images** and explain the rationale behind each redesign decision based on Human–Computer Interaction principles.

7.1 Home Page Redesign (Before vs After)

Before Redesign:

The original home page lacked a clear visual hierarchy. Navigation elements, banners, and product highlights competed for attention, making it difficult for users to immediately identify the primary purpose of the page. Typography styles were inconsistent, spacing was limited, and brand identity was weak. As seen in the before-design images, users were required to visually scan the entire page to locate important actions such as browsing products or accessing categories. This increased cognitive load and negatively affected first-time user experience.

After Redesign:

The redesigned home page introduces a structured layout with clearly defined sections. Navigation is prominently positioned at the top, supported by consistent typography and spacing. Brand colors and font styles are applied consistently, creating a cohesive visual identity. Featured products and call-to action elements are visually emphasized, guiding users naturally through the page. These changes directly address the heuristics of **aesthetic and minimalist design, consistency and standards, and recognition rather than recall**.

Figure 1 Before Home Page

Figure 2 After Home Page

7.2 Product Listing Pages (Before vs After)

Before Redesign:

In the original product listing pages, product cards lacked uniformity. Product images, prices, and names were not clearly distinguished, making product comparison difficult. Users needed additional effort to interpret product information, which reduced efficiency during browsing.

After Redesign:

The redesigned product listing pages display products using standardized cards with consistent image sizes, clear pricing, and readable typography. Improved spacing and alignment allow users to scan products quickly. Filters and navigation elements are more visible, improving browsing efficiency. This redesign supports the heuristics of flexibility and efficiency of use and consistency and standards.

LATEST ARRIVALS

Figure 4 After Product Listing Page

7.3 Product Detail Page Redesign

Before Redesign:

The original product detail pages did not effectively prioritize essential information such as product images, price, and selection options. Size and color options were visually weak, leading to confusion during selection.

After Redesign:

The redesigned product detail pages clearly prioritize product imagery, pricing, and descriptive information. Size and color options are visually grouped and positioned close to the primary action buttons. This supports faster decision-making and reduces the likelihood of errors, aligning with error prevention and visibility of system status heuristics.

7.4 Size and Color Selection Interface (Before vs After)

Before Redesign:

The before-design images show that selected sizes and colors were not clearly indicated. Users could not easily confirm their selections, increasing the risk of purchasing incorrect variants.

After Redesign:

In the redesigned interface, selected sizes and colors are clearly highlighted using borders and color changes. Immediate visual feedback confirms the user's selection. This significantly improves user confidence and directly addresses issues related to visibility of system status and error prevention.

7.5 Login and Create Account Pages (Before vs After)

Before Redesign:

The original login and create account pages contained tightly packed form elements with limited guidance. Error messages were unclear or absent, causing frustration during form completion.

After Redesign:

The redesigned forms use improved spacing, clear labels, and structured grouping of input fields. Inline validation and descriptive error messages guide users in correcting mistakes efficiently. Success messages provide confirmation, enhancing trust and satisfaction. These improvements align with help users recognize, diagnose, and recover from errors.

The screenshot shows the original LURRELI login page. At the top, there is a navigation bar with a search icon, the brand name 'LURRELI', and user/account icons. Below this is a list of product categories: 'DISCOUNT SALE', '"WOMEN IN POWER" WORKWEAR EDIT', '"VIVANAA" LOOMED IN CEYLON', '"GLAMOUR WALK" EVENING EDIT', 'THE PREMIUM JEANS', '"JUST RELAX" CASUAL EDIT', '"SUMMER BREATHING" LINEN EDIT', 'ALL PRODUCTS', and 'CONTACT'. The main heading is 'LOGIN'. Below it are two input fields: 'EMAIL' and 'PASSWORD'. The 'PASSWORD' field has a 'Forgot password?' link next to it. Below the input fields is a black 'SIGN IN' button. At the bottom, there is a 'Create account' link.

Figure 9 Before Login Page

The screenshot shows the redesigned LURRELI login page. The top navigation bar is now a solid pink color with the LURRELI logo on the left and icons for user, cart, and heart on the right. The product categories are listed in the center of the bar: 'ALL PRODUCTS', 'DISCOUNT SALE', 'WORKWEAR EDIT', 'CASUAL EDIT', 'LOOMED IN CEYLON', 'EVENING EDIT', and 'CONTACT'. The main heading is 'LOGIN'. Below it are two input fields: 'EMAIL' and 'PASSWORD'. The 'PASSWORD' field has a 'Forgot password?' link next to it. Below the input fields is a pink 'SIGN IN' button. At the bottom, there is a 'Create account' link.

7.6 Contact Us Page Redesign (Before vs After)

Before Redesign:

The original contact page lacked clear separation between contact information and form elements. Users could easily miss important details or become confused when submitting inquiries.

After Redesign:

The redesigned contact page presents contact details and the inquiry form in a clean, organized layout. Improved spacing, readable typography, and clear labels enhance accessibility and usability, supporting effective communication.

Figure 14 After Contact Us Page

7.7 Footer Page Redesign (Before vs After)

Before Redesign:

The original footer had a simple, three-column layout with minimal design elements on a clean white background. The left column contained basic navigation links (Privacy Policy, Shipping & Returns, Terms & Conditions, Where are we?), the center featured an email newsletter signup with "Sign Up and Save" heading, and the right column displayed the "Get in Touch" section with the Lurreli logo, tagline "BE UNIQUE, BE BRAVE, BE DIVINE," contact phone numbers, and email address. The footer concluded with a simple "Powered by Shopify" credit at the bottom. The design was functional but sparse, with significant empty white space and lacking visual interest or comprehensive information architecture.

After Redesign:

The redesigned footer features a sophisticated layout with a large watermark of the Lurreli logo pattern in the background, creating visual depth and brand reinforcement. The left section now includes the Lurreli logo with a descriptive tagline: "Sri Lanka's premier online clothing destination for women who want to express their unique style with confidence and elegance." The expanded "Customer Service" section includes additional links like Size Guide and FAQs. The center maintains contact information with distinctive icons for phone and email, while the right section features the newsletter signup and a new "Follow Us" section with social media icons (Instagram, Facebook, Twitter, LinkedIn). A "Secure Payment Methods" section displays trust badges including Koko, Mint pay, Visa, Mastercard, and American Express logos. The footer concludes with a professional copyright notice "© 2025 - All Right reserved! Designed & Developed By Shopify." The watermark creates an elegant branded background that adds sophistication without overwhelming the content.

Figure 15 Before Footer Page

Figure 16 After Footer Page

7.8 Feedback Redesign (Before vs After)

Before Redesign:

The original feedback section featured a bold, dramatic design with a solid black background and staggered white cards displaying customer testimonials. The layout used an overlapping carousel format where the center card (Rehan Perera's review) dominated while side cards from Chathushki Tahani and Isuri Ramanayaka were partially visible. All three reviews displayed perfect 5-star ratings, emphasizing delivery speed, product quality, and unique designs. The heading "DELIGHTED CUSTOMERS WITH FEEDBACK" appeared in white text, and the design included carousel navigation dots at the bottom. While visually striking and suitable for luxury brand positioning, the high-contrast black-and-white scheme created a dramatic, exclusive atmosphere that required user interaction to view all testimonials fully. The design lacked visual elements like customer avatars and relied solely on text-based testimonials for credibility.

After Redesign:

The redesigned footer features a sophisticated layout with a large watermark of the Lurreli logo pattern in the background, creating visual depth and brand reinforcement. The left section now includes the Lurreli logo with a descriptive tagline: "Sri Lanka's premier online clothing destination for women who want to express their unique style with confidence and elegance." The expanded "Customer Service" section includes additional links like Size Guide and FAQs. The center maintains contact information with distinctive icons for phone and email, while the right section features the newsletter signup and a new "Follow Us" section with social media icons (Instagram, Facebook, Twitter, LinkedIn). A "Secure Payment Methods" section displays trust badges including Koko, Mint pay, Visa, Mastercard, and American Express logos. The footer concludes with a professional copyright notice "© 2025 - All Right reserved! Designed & Developed By Shopify." The watermark creates an elegant, branded background that adds sophistication without overwhelming the content.

DELIGHTED CUSTOMERS WITH FEEDBACK

★★★★★

"I ordered a pair of trousers today. And these awesome guys deliver it today itself. And it was so good. The material was so good and comfy. Thank you so much guys You guys have done a great job. Keep it up ❤️."

Chathushki Tahani
Sri Lanka

★★★★★

"This is very beautiful. There are no words to describe the quality of its clothes. Since then it is the only place that has given customers a good place. This dress is very beautiful. Always keep that virtue and move forward. We say this is the place to buy a dress for you and yours. And the only place where there are clothes for those who want to dress well. Thank you Lurreli ❤️👍👍."

Rehan Perera
Sri Lanka

★★★★★

"Really love Lurreli collection and very uncommon designs. Reasonable prices and very friendly staff. Highly Recommended for every girl. 🙌"

Isuri Ramanayaka
Sri Lanka

Isuri Ramanayaka
★★★

"Really love Lurreli collection and very uncommon designs. Reasonable prices and very friendly staff. Highly Recommended for every girl. 🙌"

7.9 Visual Identity: Brand Colors and Typography

The redesign consistently applies a defined color palette and font set, as shown in the design assets. Consistent use of brand colors improves recognition and aesthetic appeal, while readable font choices enhance accessibility. This consistency supports the heuristic of consistency and standards and improves overall user satisfaction.

8. Wireframes and Prototypes

Wireframes and high-fidelity prototypes were used to establish layout structure, validate navigation flow, and ensure visual consistency. Interactive prototypes enabled early identification of usability improvements and supported iterative design.

9. Evaluation of the Redesigned Interface

The redesigned interface demonstrates clear improvements in learnability, efficiency, error reduction, and user satisfaction. The redesign aligns strongly with Nielsen's usability heuristics and core usability goals, confirming the effectiveness of a user-centered design approach.

10. Conclusion

This usability evaluation and redesign study of the Lurreli Online Shopping Store demonstrates the practical application of Human-Computer Interaction (HCI) principles in improving real-world interactive systems. The primary objective of this assignment was to identify usability shortcomings in the existing Lurreli website and to propose a user-centered redesign grounded in established usability theories, heuristics, and design methodologies. Through a structured and systematic evaluation process, the study successfully achieved this objective.

The usability evaluation conducted using Nielsen's Ten Usability Heuristics, simulated user testing, simulated user surveys, and persona-based analysis, revealed several critical usability issues. These included unclear navigation structures, inconsistent visual design, weak system feedback, inefficient form interactions, poor size and color selection mechanisms, and limited mobile usability. Such issues negatively impacted key usability goals such as learnability, efficiency, error prevention, and overall user satisfaction. The findings reinforced the importance of visibility, consistency, feedback, and accessibility in e-commerce environments, where user decisions are often time-sensitive and experience-driven.

The use of buyer personas Thrushi Perera and Dilan Fernando played a vital role in shaping the redesign strategy. These people represented distinct but realistic groups with different goals, behaviors, and pain points. By incorporating persona-driven insights, the redesign addressed both mobile-focused, trend-driven users and efficiency-oriented professional users. This ensured that design decisions were not based solely on assumptions but were aligned with user needs and expectations. As a result, the redesigned interface supports a wider range of users while maintaining simplicity and usability.

The redesigned Lurreli website demonstrates clear improvements in terms of navigation clarity, visual hierarchy, interaction feedback, and error prevention. The implementation of consistent layouts, clear content grouping, enhanced form validation, and visible system status indicators significantly reduced cognitive load and uncertainty during user interactions. Improvements to elements such as the footer, size and color selection, and feedback mechanisms directly addressed previously identified usability violations and aligned strongly with HCI best practices.

Before-and-after design comparisons further validate the effectiveness of the redesign. The redesigned interface not only resolves usability problems but also creates a more modern, professional, and trustworthy user experience. This is particularly important in e-commerce systems, where user trust and ease of interaction directly influence purchasing decisions and customer retention.

From an academic perspective, this assignment highlights the importance of iterative design and evaluation-driven development in HCI. It demonstrates that usability is not a one-time consideration but an ongoing process that requires continuous evaluation, user feedback, and refinement. Even small interface improvements such as clearer feedback messages or better navigation can have a significant impact on user experience.

In conclusion, the Lurreli usability evaluation and redesign successfully illustrate how applying HCI theories and usability principles can transform an existing system into a more effective, user-friendly, and accessible platform. This study reinforces the value of user-centered design approaches in developing interactive systems and provides a strong foundation for future improvements, including real-user testing, accessibility audits, and performance optimization. The knowledge and skills gained through this assignment are directly applicable to real-world system design and development, making this study both academically valuable and practically relevant.
